

Android

The directions to Sei Camini are given in text and images and presented in a browser window: they do not require a data or GPS connection but are simply an offline static map with enhancements.

The main page (To_Sei_Camini.html) shows text directions and has small images clipped from GoogleMaps and GoogleStreetMap, the images chart the journey from Falconara Airport to Sei Camini reading left to right and top to bottom.

Clicking on any of the images opens a full screen version of the same image.

In each case, the top half of the screen shows a picture of what the junction looks like on the ground and the bottom half is a small clip from the appropriate section of the map showing direction of travel etc.

Links are provided at the bottom of the large images to navigate directly to the preceding and subsequent images (arranged in sequence of travel) as well as a link back to the main page.

It can be difficult to find and open a file from an Android browser (any/all of them) so there are a couple of extra apps involved:

1. a file explorer or browser to locate the html file we need to open
2. an app to provide the option of opening html files with a browser instead of a viewer

Step 1

Install "Open in Browser" (or similar)

This small free app from the Play Store provides an extra menu option when trying to open an html file that allows you to open it with your default browser.

Step 2

If you don't already have one, install a file browser such as "AntTek Explorer" from the Play Store

Step 3

Open the email containing the compressed (zip) directions file (To_Sei_Camini.zip) and download or save the attachment

Step 4

Open your file browser and navigate to "Download" folder - this will probably be showing on the screen when you open the explorer

Step 5

Find the zip file (To_Sei_Camini.zip) in the Download folder and open it from the long press menu then choose Extract Here (or similar instruction from your file explorer)

Step 6

In you file explorer navigate to the un-compressed data (this will be in a folder called "To_Sei_Camini" in the Download folder unless you changed the default path when you extracted) and open the file To_Sei_Camini.html in a browser - do not choose to open it in html viewer or other apps.

You should now be able to see the directions in your browser, it is probably sensible to create a bookmark to save repeating Step 6 every time you want to look at the maps
